

Demo Robot Design Analysis

Chassis	Description	Notes
shape		
material		
Connectors		
Motor Placement		
Omni Wheel Placement		
Control Hub Placement		
Battery Placement		

Could the robot drive forward and backward?

Could the robot turn right and left?

Did you like the way the controls were handled with the gamepad?

Could the robot push a ball?

Could the robot release the balls?

Could the robot park?

Could the robot double fully park?

Flywheel Shooter	Description	Notes
mount to chassis		
floor material		
side wall material		
motor mount/position		
wheel type		
launch angle		
launch power		

Did the flywheel shooter turn off and on?

Could you score with this shooter?

Was the flight of the ball consistent?

what was the range of this shooter?

hopper	Description	Notes
mount to fly wheel		
floor material		
side wall material		
angle		
capacity		

Did the balls seem stable in the shooter while you were driving?

Was it relatively easy for the human operator to place the balls in the hopper?

trigger (servo)	Description	Notes
mount to hopper		
horn material		
push material		
placement		
range of motion		

Did the trigger consistently launch the ball?

Did the trigger get stuck?

Describe the overall experience driving this robot. How did you feel driving this robot?

Describe the trajectory of the ball after it was shot. Did you feel confident you would score?

What do you like about this robot's design?

What could you do to improve the performance of this robot design?
